

SMSPool API

This is the Postman directory for SMSPool in order to simplify your API needs.

AUTHORIZATION Bearer Token

Token

Informative endpoints

All informative endpoints used in order to request extra information that were not categorized by the previous folders.

AUTHORIZATION Bearer Token

This folder is using Bearer Token from collection [SMSPool API](#)

POST Retrieve country success rates per service

```
https://api.smspool.net/request/success_rate
```

This API endpoint is used to retrieve success per country for SMSPool requests. It sends an HTTP POST request to the URL `https://api.smspool.net/request/success_rate`.

Please use either the service ID, or the service name as service param.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection [SMSPool API](#)

PARAMS

service	1
---------	---

Body formdata

service	1
---------	---

POST Balance

```
https://api.smspool.net/request/balance
```

This HTTP POST request is used to retrieve the balance for a specific SMSPool. The request is sent to the URL `https://api.smspool.net/request/balance`.

Request Parameters

This request require the `key` param which is your API key

Response

The response to this request will have a status code of 200 if the request is successful. The response body will be in JSON format and will include a `balance` field. However, the last execution of this request returned an empty string for the `balance` field.

Please note that the actual value of the `balance` field may vary depending on the user and its configuration.

AUTHORIZATION Bearer Token

POST Suggested Countries

```
https://api.smspool.net/request/suggested_countries
```

This API endpoint is used to retrieve suggested countries for SMS pool requests. It sends an HTTP POST request to the URL `https://api.smspool.net/request/suggested_countries`.

Please use either the service ID, or the service name as service param.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

service	1
---------	---

POST Suggested Pools

```
https://api.smspool.net/pool/retrieve_valid
```

This API endpoint is used to retrieve suggested pools for SMSPool requests. It sends an HTTP POST request to the URL `https://api.smspool.net/pool/retrieve_valid`.

Please use either the service ID, or the service name as service param.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

service	395
---------	-----

	Service retrieved from "Service list" endpoint
country	2
	Country retrieved from "Country list" endpoint
web	1
	Return array format

GET Country list

`https://api.smspool.net/country/retrieve_all`

This API endpoint is used to retrieve the full country list for SMSPool requests. It sends an HTTP GET request to the URL `https://api.smspool.net/country/retrieve_all`.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

GET Service list

`https://api.smspool.net/service/retrieve_all`

This API endpoint is used to retrieve the full service list for SMSPool requests. It sends an HTTP GET request to the URL `https://api.smspool.net/service/retrieve_all`.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

country	1
	Optional parameter to request services per country

POST Pool list

```
https://api.smspool.net/pool/retrieve_all
```

This API endpoint is used to retrieve a list of our active pools for SMSPool requests. It sends an HTTP POST request to the URL `https://api.smspool.net/pool/retrieve_all`.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

SMS

AUTHORIZATION Bearer Token

This folder is using Bearer Token from collection **SMSPool API**

POST Order SMS

```
https://api.smspool.net/purchase/sms
```

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

country

1

The country in ISO format or number retrieved from the **Country List** endpoint

service

1

service	1 The service or number retrieved from the <code>Service List</code> endpoint
pool	1 The pool or number retrieved from the <code>Pool List</code> endpoint (optional)
max_price	0.01 The max price you are willing to pay per number
pricing_option	Set to 0 if you'd like the cheapest numbers, set to 1 for highest success rate
quantity	2 Quantity of numbers ordered
areacode	Areacodes you would like to include or exclude in JSON format
exclude	Set exclude to 1 if you would like to exclude all listed area codes.
create_token	0 Optional param; set to 1 if you'd like to create a token link that anyone can access.
activation_type	SMS Options: SMS, VOICE, FLASH. SMS will receive regular SMS, VOICE will receive phone calls that mentions the SMS and FLASH is for FLASH calls for verification.
carrier	Options: 1 or 2. Pick a carrier (only works for pool Foxtrot US)
phonenumbers	In case you want to select a specific phone number to order

POST Check SMS

```
https://api.smspool.net/sms/check
```

You may run into ratelimits while using this endpoint for high rate requests, we recommend using

/request/active instead as it will list all your orders at the same time.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

orderid ABCDEFGH

key

POST Active orders

<https://api.smspool.net/request/active>

The recommended endpoint to retrieve your current active orders, this will display all your orders at the same time. We recommend using this endpoint to iterate through your active orders to retrieve your SMS messages.

AUTHORIZATION Bearer Token

Token

Body formdata

key

POST Cancel SMS

<https://api.smspool.net/sms/cancel>

Cancel your SMS order

Cancel your SMS order

Responses

| **Success** | {"success":1} | | **Fail** | {"success":0} |

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

orderid 16GJCFZA

key

POST Cancel All SMS

https://api.smspool.net/sms/cancel_all

Cancel your SMS order

Responses

| **Success** | {"success":1} | | **Fail** | {"success":0} |

AUTHORIZATION Bearer Token

Token

Body formdata

key

POST Clear SMS Cache

`https://api.smspool.net/sms/clear_cache`

Clear your previous SMS cache to allocate previous numbers again

Responses

| **Success** | {"success":1} |
| **Fail** | {"success":0} |

AUTHORIZATION Bearer Token

Token

Body formdata

key

POST Activate SMS

`https://api.smspool.net/sms/activate`

This endpoint will forcefully activate an SMS to set it available for future resends, please keep in mind that these orders are NOT eligible for a refund after activating them.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

ABCDEFGH

<https://api.smspool.net/sms/reactivate>

This endpoint will reactivate an order, please keep in mind that these orders are NOT eligible for a refund after activating them.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

16GJCFZA

<https://api.smspool.net/request/archive>

This API endpoint is used to archive a request in the SMS Pool system. The HTTP POST request should be sent to `https://api.smspool.net/request/archive`.

Request Parameters

The `key` parameter is required for this endpoint, this is your API key.

Response

The response for this API endpoint will have a status code of 200, indicating a successful request. The response body will be in JSON format and will contain the following properties:

- `success` (integer): A flag indicating the success of the request. A value of 0 indicates failure.
- `message` (string): An optional message providing additional information about the request. In this case, the message is empty.

Please note that the response may contain additional properties not mentioned here, but they can be ignored for the purpose of this documentation.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

key

POST Check Resend

https://api.smspool.net/sms/check_resend

Check if the order can be resent or not.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

orderid	ABCDEFGH
---------	----------

key

DOCT **Descend**

```
https://api.smspool.net/sms/resend
```

Resend

Resend the order. Keep in mind that some pools will have a charge per resend. You can see whether the resend will have a charge using the "Check Resend" endpoint

Responses

| **Success** | {"success":1,"message":"Number has been requested again","resend":0} |
| **Fail** | {"success":0,"message":"Phonenumber could not be requested again, try later again.,"resend":0} |

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

orderid ABCDEFGH

key

POST One-time SMS stock

```
https://api.smspool.net/sms/stock
```

This API endpoint is used to retrieve one-time SMS stock in the SMSPool system. The HTTP POST request should be sent to `https://api.smspool.net/sms/stock`.

Request Parameters

The `key` parameter is required for this endpoint, this is your API key.

Response

The response for this API endpoint will have a status code of 200, indicating a successful request. The response body will be in JSON format and will contain the following properties:

- `success` (integer): A flag indicating the success of the request. A value of 0 indicates failure.
- `message` (string): An optional message providing additional information about the request. In this case, the message is empty.

Please note that the response may contain additional properties not mentioned here, but they can be ignored for the purpose of this documentation.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

key

country	1	Country retrieved from "Country list" endpoint
service	1	Service retrieved from "Service list" endpoint
pool	7	Pool retrieved from "Pool list" endpoint

POST One-time stock for all services

```
https://api.smspool.net/sms/all_stock
```

This API endpoint is used to retrieve one-time SMS stock in the SMSPool system. The HTTP POST request should be sent to `https://api.smspool.net/sms/stock`.

Request Parameters

The `key` parameter is required for this endpoint, this is your API key.

Response

The response for this API endpoint will have a status code of 200, indicating a successful request. The response body will be in JSON format and will contain the following properties:

- `success` (integer): A flag indicating the success of the request. A value of 0 indicates failure.
- `message` (string): An optional message providing additional information about the request. In this case, the message is empty.

Please note that the response may contain additional properties not mentioned here, but they can be ignored for the purpose of this documentation.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

key

country	1	Country retrieved from "Country list" endpoint (optional)
service	1	Service retrieved from "Service list" endpoint (optional)
pool	7	Pool retrieved from "Pool list" endpoint (optional)

POST Order History

```
https://api.smspool.net/request/history
```

This API endpoint is used to retrieve the history of SMS requests. It is an HTTP POST request that should be made to the following URL: `https://api.smspool.net/request/history`.

The request requires the ``key`` parameter which is your API key.

The response returned by the API is a JSON array. Each element in the array represents a historical SMS request and contains the following properties:

- `cost` : The cost of the SMS request.
- `order_code` : The order code associated with the SMS request.
- `phonenumber` : The phone number to which the SMS was sent.
- `code` : The code associated with the SMS request.
- `full_code` : The full code associated with the SMS request.
- `short_name` : The short name associated with the SMS request.
- `service` : The service associated with the SMS request.
- `status` : The status of the SMS request.
- `pool` : The pool associated with the SMS request.
- `timestamp` : The timestamp of the SMS request.
- `completed_on` : The completion date of the SMS request.
- `expiry` : The expiry time of the SMS request.
- `time_left` : The time left for the SMS request to expire.

Please note that the values for the properties are not provided in the response example, so they may be empty or null.

The last execution of this API request returned a response with a status code of 200, indicating a successful execution. The response body contained an array of SMS request history objects.

Please refer to the API documentation for more details on how to use this endpoint and interpret the response.

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

key

start

0

Which row you'd like to start from

length

1000

Max length of all rows

max length of an row

search

Search query for phone number, order_code, service or country

POST Request available areacodes

https://api.smspool.net/request/areacodes

AUTHORIZATION Bearer Token

This folder is using Bearer Token from collection **SMSPool API**

POST Retrieve all pricing

```
https://api.smspool.net/request/pricing
```

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

key	Optional API key
country	1 Optional parameter to request services per country
service	1
pool	1
max_price	0.05

POST Retrieve specific price & Success Rate

```
https://api.smspool.net/request/price
```

AUTHORIZATION Bearer Token

This request is using Bearer Token from collection **SMSPool API**

Body formdata

key	Optional API key
country	1 Country retrieved from "Country list" endpoint

service	1
	Service retrieved from "Service list" endpoint
pool	7
	Pool retrieved from "Pool list" endpoint

Carrier

AUTHORIZATION Bearer Token

This folder is using Bearer Token from collection [SMSPool API](#)

POST Lookup

`https://api.smspool.net/carrier/paid_lookup`

This API endpoint is used to perform a paid lookup for a phone number. The request is sent via an HTTP POST method to the following URL: `https://api.smspool.net/carrier/paid_lookup`

json

```
{
  "success": true,
  "phonenumber": "",
  "country": "",
  "carrier": "",
  "carrier_type": "",
  "charge": 0
}
```

The `success` field indicates whether the lookup was successful or not. The `phonenumber` field represents the phone number for which the lookup was performed. The `country` field indicates the country associated with the phone number. The `carrier` field provides the name of the carrier associated with the phone number. The `carrier_type` field specifies the type of carrier. The `charge` field represents the cost charged for the lookup operation.

Please note that specific values for `phonenumber`, `country`, `carrier`, and `carrier_type` were not provided in the response, and the `charge` field had a value of 0.

To use this endpoint, send an HTTP POST request to the provided URL with the necessary parameters. The request should include the phone number for which you want to perform the lookup. The response will contain the details of the carrier and associated information.

Make sure to handle any errors that may occur during the lookup process and check the `success` field in the response to determine the outcome of the operation.

eSIMs

Introduction to the eSIM API usage. Here's a step-to-step process on how to streamline your eSIM purchases:

1. Retrieve the country list from **View eSIM countries**
2. Retrieve the plans per country using the **countryCode**
3. Create your first purchase using the **Purchase eSIM**
4. Retrieve the **transactionId** from **Purchase eSIM**
5. Use the **View eSIM profile endpoint** to retrieve the QR code or the access URL in order to install

5. Use the **view eSIM profile** endpoint to retrieve the QR code, or the access URL in order to install the eSIM or view remaining data.
